DESCRIPTORS: *Dehydration, *Sulfonyl compounds, *Chlorides, *Hydrates, *Phosgene, Thallium compounds, Metallic compounds.

A method is described for the dehydration of hydrates. The method is based on the fact that the hydrate water is converted by reaction with thionyl chloride or carbonyl chloride into gaseous compounds (SO_2 or CO_2 and HCl), which can be separated directly from the anhydrous compounds. The methods are applied to the dehydration of a series of metal chloride hydrates. The preparation (Chemistry--Inorganic, TT, v. 9, no. 11) (over)
